***Response to Preliminary Amendment***

***Claim Rejections - 35 USC § 102***

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-10, 16-19, 21-23 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Scharsig DE4312683.

Document DE-A-4312683 discloses (see in particular col. 4, line 58 - col. 5, line 36; col. 5, lines 48 - 52; col. 5, line 65 - col. 6, line 5; col. 7, lines 1 5-29) a device for heating liquids (and in particular milk) comprising all independent claim 1 and dependent claims 2-10, 16-19, 21- 23 features.

In particular said DE-A-4312683 discloses a heating element (11) adapted to reducing the power supplied over time with the increasing temperature of the liquid (see col. 5, lines 32-36). Furthermore it discloses an aluminum thermal diffuser (13) and a thermal sensor (1-6) to disconnect the heating element upon reaching a pre- determined temperature (see col. 2, lines 50-54), as well as a closing element (Aussengeh&use 18: col. 5, lines 65 - col. 6, line 6) adapted to housing the heating element, the thermal sensor, the thermal diffuser and-an electrical connector (20). It discloses also a layer of conductive paste between the heating element and the thermal diffuser and between the thermal diffuser and the bottom (see col. 5, lines 48-52).

Claims 11 and 20 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Scharsig.

The additional features disclosed in dependent claims 11,20 seem to relate merely to constructional measures coming within the scope of the customary practice followed by persons skilled in the art and involving no unexpected effects.

***Allowable Subject Matter***

Claims 12-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The feature of claim 12 that the thermal sensor is in contact with the container through an aperture in the thermal diffuser is neither disclosed nor suggested in the available state of the art. The subject-matter of dependent claim-12 is therefore new and involve an inventive step over the available state of the art, as well as claims 13-15, which are dependent on said claim 12.
